

High Performance Air Operated Diaphragm Pumps

Yamada Advantages

The Yamada Corporation has been a leading producer of industrial equipment since 1905, and of fluid handling products for over 65 years. As a leader in pneumatic pumping technology, Yamada is known in many industries worldwide for its innovative products, superior quality, and unmatched reliability. An impressive history of product design and engineered solutions establishes Yamada as forerunner in industrial pump technology.

Yamada's reputation for manufacturing top quality products, allied with continuing efforts in research and development, have created a strong foundation for market leadership. As an ISO 9001 certified corporation, stringent quality procedures are followed throughout the manufacturing process, including assembly procedures and product testing.

The Yamada Corporation is headquartered in **Tokyo** with manufacturing facilities located throughout Japan. Production facilities are located in **Arlington Heights, Illinois, USA**, servicing the Western Hemisphere; **The Netherlands**, providing support throughout Europe, Africa, and the Middle East; **Thailand**, covering the Southeast Asia; and **Shanghai**, covering the emerging Asian market. These offices are support centers for over 400 authorized fully stocking Yamada distributors worldwide.

Advantages and Characteristics

1. **Handle a wide variety of fluids with high solids content:** No close fitting or rotating parts so liquid with high solids content and/or particle size can be easily pumped.
2. **Self Priming:** The Yamada pump design (incorporating internal check valves) provides high suction lift even at dry start-up and with heavier fluids.
3. **Ability to run dry:** No close fitting or sliding parts are at risk—the pump can run dry without damage.
4. **Variable flow rate and discharge pressure:** Yamada pumps will run at any setting within their operating range simply by adjusting the air inlet pressure and system conditions. One pump can fit a broad spectrum of applications.
5. **Portable/Simple Installation:** Yamada pumps transport easily to the application site. Simply connect an air supply, attach fluid connections, and the pump is ready to perform. There are no complex controls to install or operate.
6. **Dead Head:** The discharge line can be closed with no damage or wear. The pump will simply slow down and stop.
7. **Shear sensitive:** The gentle nature and minimal parts contact with the liquid make Yamada pumps an excellent choice for shear sensitive fluids.
8. **Safe Operation:** Powered by compressed air, Yamada pumps are intrinsically safe.
9. **Submersible:** If external components are compatible, Yamada pumps can be submerged in liquids by simply running the exhaust line above the liquid level.
10. **Pumping efficiency remains constant:** There are no rotors, gears, or pistons, which wear over time and lead to the gradual decline in performance/flow rate.

Engineered to Perform. Designed for Long Life.

Rugged, Bolted Construction

All pumps feature bolted construction, which eliminates leak paths and simplifies assembly with actual torque values. This style is superior to clamp band retainer designs that bend or warp, thus causing misalignment and general assembly issues, possibly leading to more unnecessary repairs.

Outside-Accessible Air Valve

Inspection or maintenance of every Yamada air valve may be performed without removing the pump from service.

Maintenance Indicator

Reset button indicates when maintenance is due.

Unified Air Valve Concept

Common-size air valve assemblies reduce parts confusion.

Pilot Valve

Unique to the Yamada design is an individual modular pilot valve that actuates the air valve. It is depressed slightly by the inner center disk creating a pressure drop at one end of the air valve, allowing shifting to occur. It is maintenance free with no cumbersome snap rings or lubricated dynamic o-rings to replace or repair.

Optimal Stroke Length

Extensive research has led to the development of an optimal stroke length that maximizes diaphragm life and performance while minimizing downtime and maintenance costs.

Yamada Air Valve Technology

Yamada air valve technology is the heart of the air-powered double diaphragm pump and determines reliability. Yamada holds several patents on its field proven valve and enjoys a superior reputation throughout the industry.

Unified Air Valve Concept

Yamada offers two common-size air valve assemblies (*shown at right*) fitting seven series of pumps, further reducing reassembly confusion and parts inventory. Other air-powered double diaphragm pump manufacturers offer multiple air valve designs and revisions in an effort to address ongoing pump reliability problems. Multiple designs and revisions typically create maintenance rebuild issues, parts confusion, and obsolete inventory. *Whether your pumps are functioning continuously or intermittently - at high or low pressure - using dirty or clean air - Yamada offers one field proven design.*

Truly Non-Lubricated Air Valve

The patented Yamada air valve on all NDP series pumps never requires lubrication or pre-packing. The advanced design eliminates the need for external lubrication, which can lead to pumpage contamination and maintenance headaches.

Yamada is proud to be the originator and still industry leader of non-lubricated air valve technology for air-powered double diaphragm pumps.

Many other pump manufacturers claim to offer a non-lubricated air valve. These valves are pre-packed with grease and are not truly lube free. Depended upon the design, their air valves will require full time lubrication for continuous operation even requiring an inline lubricator be installed oftentimes, depending on the quality of the air running the pump.

Component Replaceable

All Yamada air valves are designed with maintenance in mind and can be replaced quickly and efficiently without taking the pump out of service, reducing downtime.

Many competitor air valves can't be repaired and instead require complete replacement of the valve assembly and housing, further increasing the cost of ownership.

Simply remove four bolts and valve cap from the Yamada pump and slide the assembled air valve into the housing unit.

↓ Air Valve fits pump models
NDP-20, NDP-25, NDP-32

Common- size Air Valve assemblies reduce parts confusion.

← air valve fits pump models NDP-40, NDP-50/500, NDP-80, and the Flap Valve Diaphragm pump.

Non-Stalling

A patented non-centering, spring-assisted shifter is incorporated into every NDP Series pump, ensuring a positive shift every time.

The 304 stainless steel C-springs provide exceptional durability and longevity and are tested to last over **300 million cycles!**

The spring assist also aids in long dead head applications for reliable startup.

Pump Body Material	Liquid Temp Range	Characteristic
A Aluminum (ADC-12/AC4C-T6)	0 ~ 100°C	Good for oil and solvent. Not good for chemical, corrosive and abrasive
S Stainless Steel (SCS14/SUS316)	0 ~ 100°C	Hard and rust resistant. Good for corrosive and abrasive liquid
F Cast Iron (FC250/S45C)	0 ~ 100°C	Hard but easy to rust. Good for Iron oxide, sludge, etc.
P Polypropylene (PPG)	0 ~ 60°C	A tough flexible synthetic thermoplastic materials
V Kynar® (PVDF)	0 ~ 60°C	Good tensile and compressive strength and high impact strength
D Groundable Acetal (POM)	0 ~ 60°C	Excellent mechanical and high-temperature properties
T PTFE	0 ~ 100°C	A synthetic fluoropolymer of tetrafluoroethylene that is characteristically resistant to heat, acid oxidizing agents and to alkalis

Diaphragm/Check Valve Material	Liquid Temp Range	Characteristic
C Neoprene (CR)	0 ~ 70°C	A tough, synthetic rubber that is resistant to the effects of oils, solvents, heat, and weather
N Buna N (NBR)	0 ~ 70°C	An oil-resistant synthetic rubber that is resistant to oil, fuel, and other chemicals
E EPDM	0 ~ 80°C	A type of synthetic rubber that is resistant to heat, ozone and weather, polar substances and steam
H Hytrel® (TPEE)	0 ~ 100°C	A thermoplastic polyester elastomer that gives the flexibility of rubbers, the strength of plastics, and the processibility of thermoplastics
S Santoprene® (TPO)	0 ~ 100°C	A flexible and durable elastomer that has environmental aging resistance, electrical properties
V Viton® (FKM)	0 ~ 100°C	A fluoropolymer elastomer that has oil, heat and chemical resistance
T PTFE	0 ~ 100°C	A synthetic fluoropolymer of tetrafluoroethylene that is characteristically resistant to heat, acid oxidizing agents and to alkalis
W PTFE+EPDM	0 ~ 90°C	Yamada offers a unique unified PTFE diaphragm with a bonded rubber backer and an outer disk integrated into the diaphragm.

Fair Guideline of Pump size and Flow rate

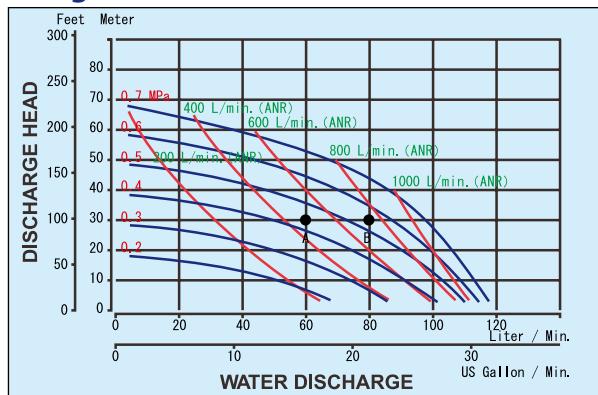

Operation with the maximum cycle shorten the pump lifetime.

To optimize pump performance and lifetime, please select pump in reference to this guideline.

Recommended Flow Rate by Pump Size

		L/min
NDP-5	5	50
DP-10	10	
NDP-15	20	
NDP-20	60	
NDP-25	90	
NDP-40	200	250
NDP-50/500	320 (NDP-50)	380 (NDP-500)
NDP-80	450	

Using Performance Curves

Precautions for pump selection

* Select a pump with safety margin (1.5 times or higher) appropriate for the required conditions with taking effective use of a diaphragm and other expendables into consideration.

* The performance curve shown on the right indicates the data measured with fresh water (viscosity 1 mPa·s, specific gravity 1.0) by dip grazing with the shown devices. The amount of liquid discharged from the pump greatly varies depending on various factors such as the "viscosity, specific gravity and slurry concentration of liquid to be transferred," "suction lift," "discharge head" and "pneumatic transportation distance." If you are not sure which pump you should select, fill in the selection criterion of the "Inquiry Sheet" on the end of the document as much as possible, and contact us.

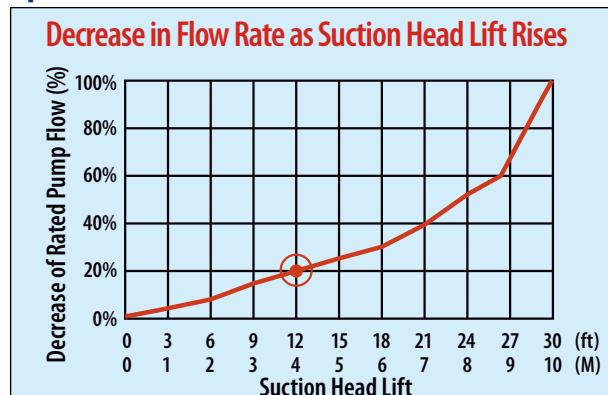

1. The solid lines plot the relation between the amount of the discharged liquid ("water discharge") and the discharge head when the corresponding pressure is given. First, decide which curve corresponds to the desired air pressure.

2. For example, when the supplied air pressure at your site is 0.5 MPa, check the curve marked "0.5 MPa."

3. When liquid to be transferred is fresh water (viscosity is 1 mPa · s and specific gravity is 1.0), the desired water discharge is 60 L/min, and the discharge head is 30 m, the corresponding axes intersect at Point A. This point is located below the 0.5-Mpa curve and satisfies the desired water discharge and discharge head with this pump (Example: NDP-20).

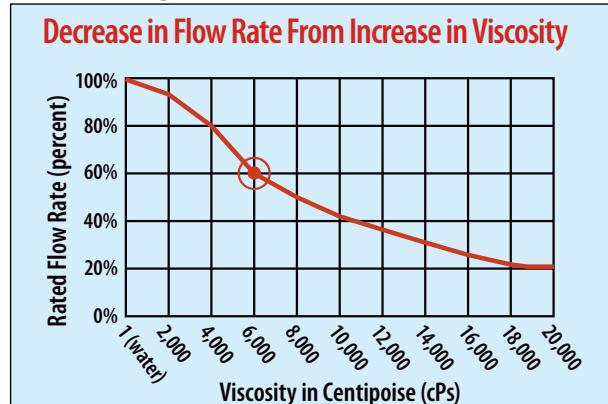

4. If it is required that "the water discharge is 80 L/min, and the discharge head is 30 m," the intersection point is "B" above the 0.5-MPa curve and this indicates that this pump cannot satisfy your conditions. In such a case, we recommend that you select the larger one (NDP-25).

Specified Suction Lift

With a suction lift of 12-ft, 4m pump rate decreases by approximately 20%. Valid for pumps 3/4" and larger; data varies with pump configuration.

Viscous Liquids Performance Data

During the conveyance of a fluid with a viscosity of 6000 cPs, the pump rate decreases to 60% of its rated value (100% = water). Valid for 3/4" pumps & larger.

Note: Please consult Yamada when both the pressure and temperature exceed 70 MPa and 180°C, respectively.

5. The dashed lines plot curves for air consumption as shown in the graph respectively.

The point A, intersection point as a result of the condition "3." above (water discharge: 60 L/min, discharge head: 30 m) is located about in the middle between the 400L/min air consumption curve and the 600L/min air consumption curve. Therefore, the air consumption under this condition is approximately 500 L/min (ANR). Since the air consumption is calculated by converting to the barometric pressure, it does not vary depending on the used air pressure.

Air	Supply	Rc3/8 or NPT3/8 includes ball valve
	Exhaust	Rc3/4 or NPT3/4 w/ silencer
Air Supply Pressure	0.2-0.7MPa	
Maximum Discharge Pressure	0.7MPa	
Discharge Volume Per Cycle	Rubber diaphragm: 670mL PTFE diaphragm: 560mL	
Maximum Size Solid	3mm	
Net Weight	12.0kg	
Body Material	Aluminum	
Diaphgram Material	Buna N, PTFE	

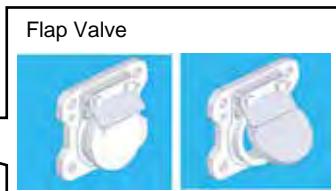

Dimensions and Performance Curve

Specialty Pumps

Flap Valve Diaphragm Pump NDP-50FAN

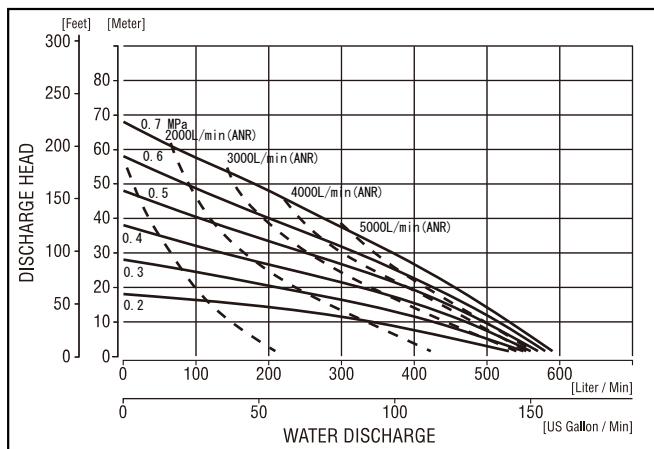

The Flap Valve Diaphragm Pump NDP-50FAN is designed to pump fluids containing solids up to 30mm in diameter.

Example Applications

- ✓ Muddy water containing soil and sand.
- ✓ Solid food waste.

Performance Curve

F-Series High Purity Pumps

Extensively field proven, Yamada F-Series clean room manufactured pumps are specifically designed for the safe and efficient transfer of ultra high-purity process chemistries. They provide maximum corrosion resistance, ultra high-purity levels and low particle generation.

Pumps includes 100% machined virgin PTFE diaphragms, liquid chambers and manifolds.

Clean Room Manufactured
1/4 inch to 1 inch Port Size

✓ For additional information, please request the High Purity Pumps catalog or visit www.yamadacorp.co.jp/global

H-Series (Mechanical Switching Type)

Mechanical Switch Pump is designed for use in process type applications, including filter press, high pressure, extended deadheading, long runs of discharge pipe, and where air consumption is critical.

Mechanically-actuated air motor based on the diaphragm movement.

Features

- ✓ *Stable stroke even at a very low speed operation!!*
- ✓ *The highest discharge pressure ever (maximum 0.85MPa)!!*
- ✓ *Expansion of operating pressure range*
- ✓ *Energy saving due to the reduced loss of the drive air!!*

Available sizes

40, 50/500, and 80

Available materials

Casing: Aluminum, Stainless Steel, Cast Iron, and PPG
Diaphragms: CR, NBR, EPDM, FKM, PTFE, TPEE, and TPO

E-Series (Electric-Switching Type)

Electric-Switching pumps are built-in high-frequency transmission proximity sensor in the pump.

Available sizes

20, 25, 40, 50/500, and 80

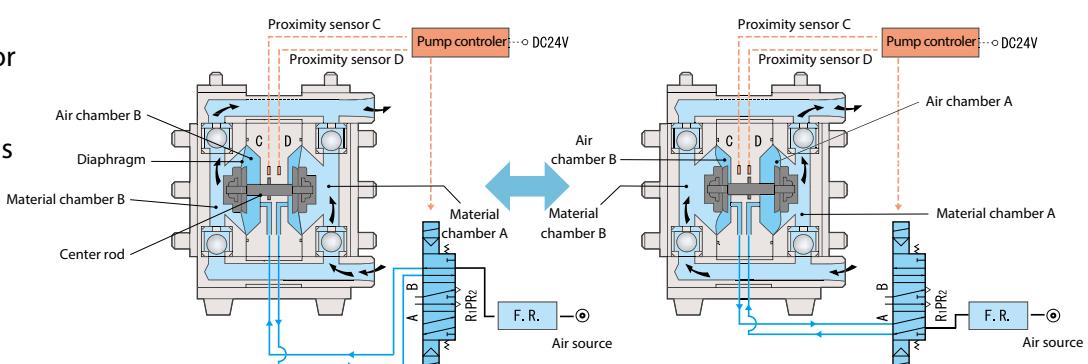

Available materials

Casing: Aluminum, Stainless Steel, Cast Iron* and PPG
*Cast iron is available only for 40, 50, and 80.
Diaphragms: CR, NBR, EPDM, FKM, PTFE, TPEE, and TPO

Remarks

- ✓ *This series is NOT explosion-proof.*
- ✓ *A solenoid valve and PLC, which are required to operate the pump, can be supplied as an option.*

A proximity sensor is installed in the pump, and the pump operation is controlled by a solenoid valve.

Drum Pumps

**Fit to 200L Drum
3/8 inch and 3/4 inch Port Size**

Specifications

Model	DP-10	NDP-20
Port Size	3/8" (10A)	3/4" (20A)
Liquid	Intake	Ø17.3 O.D.
	Discharge	Rc3/8
Air	Supply	Rc1/4 incl. ball valve
	Exhaust	Rc3/8 incl. silencer
Air Supply Pressure	0.2-0.7MPa	0.2-0.7MPa
Maximum Discharge Pressure	0.7MPa	0.7MPa
Discharge Volume Per Cycle	50mL	BA:350mL BAT:240mL
Maximum Size Solid	1mm	2mm
Net Weight	BA:4.5kg BS:6.2kg	10.7kg
Accessories	713237 Suction Pipe (SUS304) 803665 Bung Adapter (ADC12)	709406 Suction Pipe (SGP) 803667 Bung Adapter (SS400)

✓ Please refer to DP-10 and NDP-20 Series technical information for additional performance data.

Model Chart

	Body Material	Diaphragm Material			
		Neoprene (CR)	Buna N (NBR)	PTFE	Hytrel® (TPEE)
DP-10	Aluminum (ADC12)	DP-10BAC-D (852918)	DP-10BAN-D (852919)	DP-10BAT-D (852920)	DP-10BAH-D (852934)
	Stainless Steel (SCS14/SUS316)	DP-10BSC-D (852921)	DP-10BSN-D (852922)	DP-10BST-D (852923)	DP-10BSH-D (852935)
NDP-20	Aluminum (ADC12)	NDP-20BAC-D (851397)	NDP-20BAN-D (851396)	NDP-20BAT-D (851398)	NDP-20BAH-D (852827)

Powder Pumps

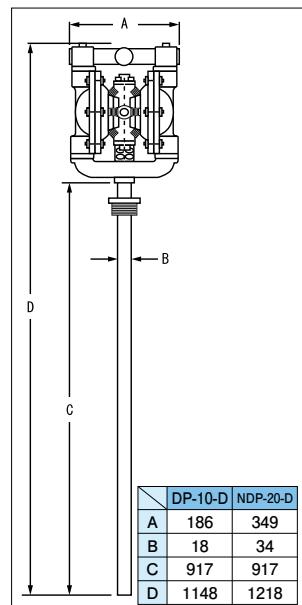

**For dry powder transfer
1 inch to 3 inch Port Size**

Yamada Powder Pumps are designed to move bulk powders more effectively throughout your process vs. other unsafe and labor intensive means. These heavy duty pumps will consistently transfer fine-grained, low-bulk density dry powders in a dust-free operation.

✓ For additional information, please request the Powder Pumps catalog or visit www.yamadacorp.co.jp/global

Companion Flange

JIS, DIN, ANSI and Ferrule
Flanges made of SUS304 or
SUS316 or PP

Pneumatic Cycle Counter

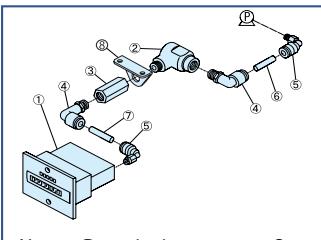

Pneumatic 8-digit
mechanical type counter

- ✓ Pump Mounting Bracket is available upon request
- ✓ No count up in dry run
- ✓ No reset function
- ✓ Modification on the center body is required for installation

Model No.	Model	Fits Pump
803413	NMC-ANS	DP-10, NDP-15 ~ 80
804847	NMC-ANH	NDP-H Series

*Except NDP-P20,P25

No.	Description	Qty
①	Counter (8-digit, No reset func.)	1
②	Quick Exhaust Valve 1/8"	1
③	Socket 1/8"	1
④	Elbow 1/8"	1
⑤	Elbow M5	1
⑥	6x4 Nylon Tube 1.000mm	1
⑦	6x4 Nylon Tube	1
⑧	Bracket	1

Raised Pump Bracket

Raised Pump Bracket
is available on request

Dry-Run Detector

The Yamada ESV-06/DRD-100 detects increases in air volume due to loss of prime or dry-running, and automatically shuts down the pump to prevent excess cycling and increased diaphragm wear.

Model No.	Model	Supply Air Press	Usable Gas	Air Inlet	Air Outlet
854006	ESV-06	0.2-0.99MPa	Air / Nitrogen	Rc3/4	Rc3/4
854008	DRD-100			NPT3/4	NPT3/4

Diaphragm Leak Detector

For NDP-40, 50/500 and 80 series, install the street elbow between muffler and exhaust port.

PT thread: 634050, NPT thread: 685716
(Sold separately)

For the DP-F series, install the Sensor Mounting Kit between the sensor and the body.
the Sensor Mounting Kit: 804042 (Sold separately)

Model No.	Model	Fits Pump	Power Supply
805139	DMS-24TN	Except NDP-5 to 15	DC24V

685968	24V AC Adapter
685969	Extension sensor cord 5M
685016	Gasket
771622	Union

High-Low Level Controller

This unit is used to control the high and low levels of liquid being pumped into or out off a container.

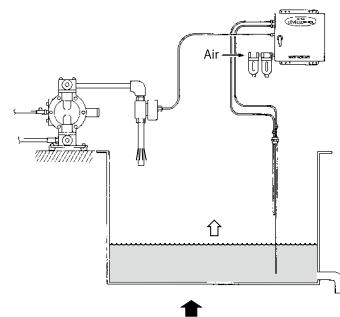

This device is driven by compressed air and is therefore suitable for use in highly explosive environments.

The system is also designed to work in many harsh environments, e.g. areas with high temperature, high humidity or even areas where there are high electromagnetic fields.

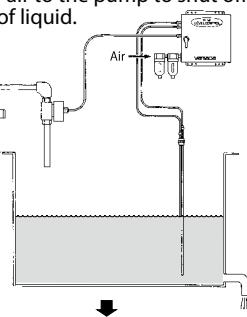

It can handle any liquid with a viscosity of less than 1000cps.

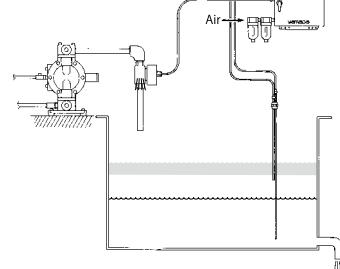

1. Liquid is pumped to raise the level in the tank.

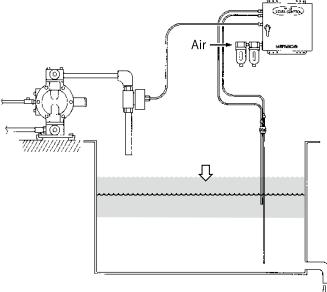

2. When the liquid reaches the upper preset limit the controller stops the supply of air to the pump to shut off the flow of liquid.

2. When the liquid level reaches the lower preset level the air supply will be started to resume the flow of liquid from the pump.

3. The liquid level becomes lower.

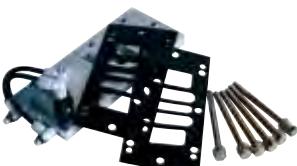

Model No.	Model	Supply Air Press.	Output Air Flow	Viscosity Limit	Weight
480005	SA-4150	0.3-0.7MPa	Max 300L/min	1Pa·s or less	6kg

Anti-Stall Device

Retrofit-able kit that pneumatically activates the air valve instantly starting pump operation

*Please use with dedicated sleeve

Model No.	Model	Fits Pump
804066	SVT-225	NDP-20,25,32
804065	SVT-458	NDP-40,50/500,80

Dedicated Sleeve

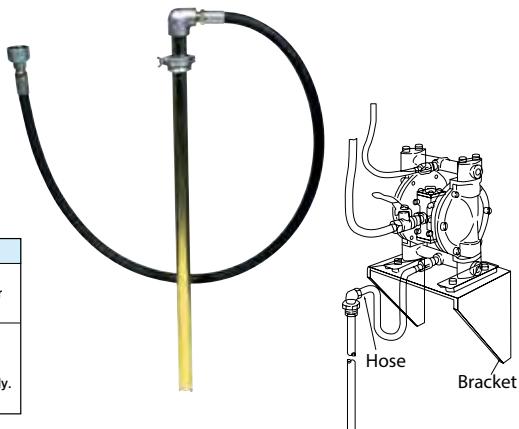

Model No.	Model
804739	Sleeve for SVT225
804740	Sleeve for SVT458

Suction Tube Kit for Drum

This Suction Tube kit fits to the 200L drum.
Pump is recommended to be mounted at the height of 1M from floor level.

Material	Model No.	Model	Fits Pump	Hose	Connection	Accessories	Remark
Carbon steel	850126	SCK-200D	Size 20	Oil hose 3/4"x2M	R3/4" with Rc1-1/2 socket	Drum bung adapter (ADC12)	Please prepare suitable connector separately.

	803406	STU-40-40	Size 40		Rc1-1/2		

Repair Parts Kit

Yamada offers complete repair parts kits for NDP Series pumps.

- Air Side Kit and Liquid side Kit are available.
- Repair parts kit contains exactly what you need.
- You can save your time finding the necessary individual parts and avoid order errors.

 Pump model selection should be carried out by the end user based on operating conditions such as liquid concentration, temperature, and other factors, as well as information issued by the chemical manufacturer.

Ideal Installation for Air-Operated Double Diaphragm Pump

Markets

General Industry and Wastewater Treatment

APPLICATIONS	For circulation and spraying of mold-release agents, factory wastewater, and pumping of waste oil.
TRANSFER FLUID	Mold-release agent, hydraulic oil, cutting oil, coolant liquid, waste oil, Sewage
INTRODUCTION REASONS	Circulation and spraying of mold-release agent can be stopped at the end. Can be used even if sludge or sludge is mixed in the liquid.

Chemical Industry

APPLICATIONS	Transfer of flammable liquids in explosion-proof area
TRANSFER FLUID	Chemicals, additives, solvents
INTRODUCTION REASONS	Air-powered. Safe and secure for use in factories where explosion-proof protection is required. Can be easily transported by trolley, etc., and highly versatile.

Painting and Printing

APPLICATIONS	As a coating pump for supplying paint to roll coaters, coating exterior wall materials, etc.
TRANSFER FLUID	Paints, varnishes, lacquers, titanium dioxide, latex, low viscosity inks such as flexographic and gravure, solvents
INTRODUCTION REASONS	Easy to adjust discharge volume, highly portable, easy disassembly and cleaning, allowing easy change of paint colors. Cutting off the flow at the end point achieves simplification of equipment.

Energy Industry

APPLICATIONS	Drainage from power plants, waste liquid collection during piping and tank cleaning, fuel transfer in explosion-proof area
TRANSFER FLUID	Rainwater, seawater, cleaning fluids, heavy oil, naphtha, solvents
INTRODUCTION REASONS	Air-powered. Safe and secure for use in factories where explosion-proof protection is required. Can be easily transported by trolley, etc., and highly versatile.

Coal Mine

APPLICATIONS	Transferring liquids mixed with sediment, wastewater, and oil
TRANSFER FLUID	Sludge, fuel oil, oil
INTRODUCTION REASONS	Can transfer even liquids mixed with sediment, and is used in mining and shale oil extraction. High maintainability.

Ceramic

APPLICATIONS	Transfer of clay and glazes
TRANSFER FLUID	Slurry, glaze
INTRODUCTION REASONS	Slurry transfer is possible. Cutting off the flow at the end point is possible.

Food and Beverages

APPLICATIONS	Transfer of food ingredients and additives, supply of pipe cleaning solution, collection of waste oil and wastewater
TRANSFER FLUID	Food ingredients, disinfectants, food additives, alcohol, waste liquids
INTRODUCTION REASONS	Easy disassembly and cleaning, with excellent operability. Air-powered type, safe even around water.

Semiconductors

APPLICATIONS	As a chemical supply system pump
TRANSFER FLUID	Chemicals, pure water, waste liquids
INTRODUCTION REASONS	Fluoroplastic wetted parts with a high corrosion resistance. Non-metallic specification eliminates the risk of contamination by metal ions.

Drug Production

APPLICATIONS	Transfer of alcohol, disinfectants and solvents
TRANSFER FLUID	Alcohol, disinfectants, solvents, formulations, water
INTRODUCTION REASONS	Small pump size allows for space-saving installation. Easy disassembly for cleaning.

Automobiles

APPLICATIONS	Supplying oil, coolant fluid, paint, etc.
TRANSFER FLUID	Oil, coolant fluid, paint, etc.
INTRODUCTION REASONS	Empty operation is possible to drain oil and fuel.

Shipbuilding

APPLICATIONS	Rainwater discharge, bilge and waste oil collection, chemical transfer, and lubricant supply
TRANSFER FLUID	Bilge, rainwater, waste oil, chemicals, lubricating oil
INTRODUCTION REASONS	Excellent self-suction capability, usable even when sludge or slurry is mixed in the liquid.

Powder

APPLICATIONS	Transfer of anhydrous powder
TRANSFER FLUID	Diatomaceous earth, toner, powder paint, silica
INTRODUCTION REASONS	Simplification of equipment, space-saving. Air-powered type for easy handling.

CAUTION WHEN SELECTING A PUMP

Yamada offers a large range of Air Operated Pumps to cater for many different kinds of materials and conditions. When selecting the most appropriate pump for a particular selection and installation please consult your local Yamada Pump Distributor or Yamada Corporation.
